## *Never Lose Momentum*

No matter the conditions you face, you can never lose momentum. As we've said many times, Valmont's goal is not simply to manufacture and sell irrigation equipment. Our goal is to lead the industry in implementing the newest ideas and technology, so that growers worldwide can reap the benefits. While the economy slowed over the last eighteen months, we did not. Our Research and Development team, our engineers and our product development experts have been working steadily to bring the latest innovations to life in our product line.

We've pressed forward with a commitment for the long term, not for quick glory. With all our combined energies, we are reaching the finish line of the challenging economic period with even more to offer our customers. Innovation has always led change at Valmont. We never lose momentum. From our very roots, this is what has made us an industry leader for decades. We've been improving our existing products, developing new ones and refining our processes so that when the next challenge comes our way, you know that we have what it takes – the momentum to keep pushing forward.

LEN ADAMS

President - Global Irrigation
